*David Armstrong was an Early Investor and Fund Director

(Camp du Larzac)

Investment Team

Jean Fau, Senior Portfolio Manager, Lead PM for Solferino

Jean has 25 years of experience in capital markets and joined Longchamp Asset Management in September 2019 to lead Credit Strategies and manage the Credit Value Fund. His career started in 1994 at Goldman Sachs, taking various responsibilities in Convertible Bonds and Equity Derivatives, gaining close exposure to relative value and credit hedge funds. In 2003, Jean joined Susquehanna International as a Portfolio Manager, responsible for European Discretionary Investments across credit, convertible and event-driven strategies. In 2009 Jean left to launch Brennus Asset Management LLP, a London-based alternative investments manager, focused on convertible bonds and other hybrid credit instruments, using a mix of directional and relative value strategies. Before joining Longchamp Jean was a Partner and Sr Portfolio Manager at Chenavari Credit Partners from December 2014 until April 2018, where he ran High Yield, Financials and Convertible Bonds strategies across all mandates. Jean holds a master degree in Business Administration from HEC Paris, France.

David Armstrong, CEO & Head of Portfolio Management

David is Chief Executive Officer at Longchamp Asset Management, which he founded in 2013. Previously, he was a Managing Director at Morgan Stanley & Co. International Plc, heading the investment bank's Funds and Fund Linked business globally. In particular, he was in charge of the FundLogic UCITS Platform and served as President of the French asset management company, FundLogic SAS. Prior to joining Morgan Stanley, David had spent fourteen years within the Global Equity and Derivatives Solutions division at Société Générale. After joining the group in Paris, David moved to Milan to head the global capital markets operations including all Equity and Fixed Income activities. He also chaired the Italian alternative asset management company, Lyxor SGR. Thereafter, he moved to New York to head up Structured Products Sales for the Americas.

David holds a master's degree in Business Administration from EDHEC, Lille, France.

Thibault Bourgeois, Portfolio Manager Assistant

Thibault is Portfolio Manager Assistant at Longchamp AM. Previously, he was in charge of the sales and structuration of investment solutions for institutional clients at Nexo Capital. Before that, Thibault had experiences at ERAAM in the multimanagement hedge funds selection and sales teams and at Amundi in the Institutional Portfolio Management team.

Thibault holds a BSc Actuarial Mathematics/Finance from Concordia University (CA) and a Master in Management from ESCP Business School (FR).

Lorenc Golemi, Chief Risk Officer & Head of Financial Engineering

Lorenc is the Chief Risk Officer at Longchamp AM. Before joining Longchamp AM, Lorenc worked in consultancy and advisory in investment banking and asset management. Previously he worked as Portfolio Manager, Risk Manager and Financial Engineer at UBS AM, CommerzBank and Dresdner Kleinwort Benson. He was in charge of systematic strategies and risk management of volatility and absolute return funds.

Lorenc holds an Engineer degree in computer science and a master's degree in applied mathematics.

Longchamp Solferino Credit Fund

Longchamp Solferino Credit Fund: Philosophical Tenets

Unconstrained, Total Return, Value Approach

Structural Inefficiencies Create Long-Term Opportunities

Philosophical Tenets:

Credit markets are cyclical and mean-reverting:

It pays to be Contrarian in credit

Technical factors – notably ratings - can drive pricing away from fundamentals

Inefficiencies can be exploited with a **flexible**unconstrained mandate through disciplined money
management and concentration in conviction trades
after bottom-up issue selection

Co-Investment: Lead PM invests most of his liquid assets in the Fund

Investment Process:

Return construction coming cumulatively from Income and Capital gains

Careful security selection among the highest yield securities in the liquid credit universe, leveraging cross-asset perspective

Use seniority of credit to increase portfolio concentration

Disciplined Capital Deployment: maximize return on risks taken, paying strong attention to drawdowns

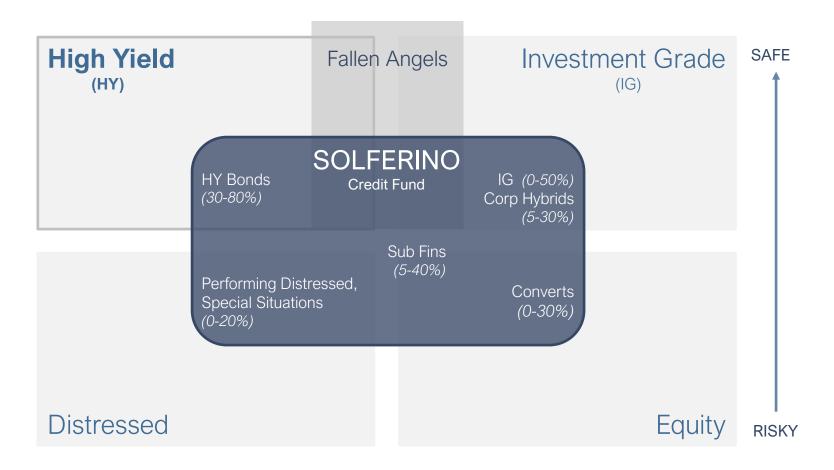

Full flexibility in risk allocation. Contrarian value approach uses sell-offs as opportunities

Unconstrained Across Asset Classes

Our goal: Select the most attractive risk-rewards in liquid credit markets

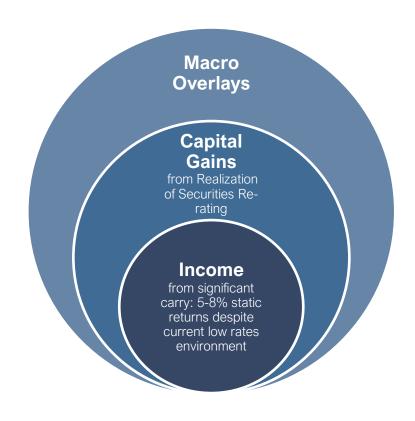

Focus: Hybrid situations straddling market segments

Fund Investment Objective

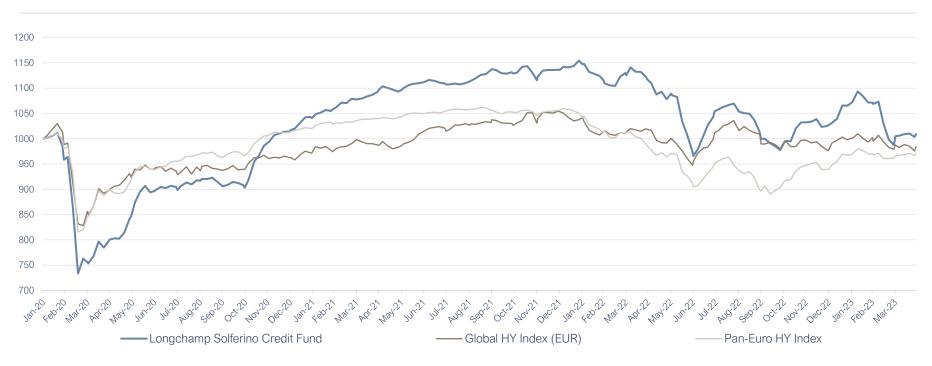

Generate attractive Equity-Like Risk-Adjusted returns from credit instruments across the full credit cycle

- To take advantage of value opportunities across Credit Markets, a Long-term contrarian mindset is essential: Apply a Private Market approach to liquid Corporate Credit Market (issues \$250M+) with a disciplined value approach: Buy as if you held to maturity.
- Leverage the unique total return opportunities from tradable credit: actively monetize gains of re-pricing of risk and exit fundamental underperformers. Historically, capital gains provide 50%+ of returns.
- **High Conviction approach** with a concentrated portfolio (25-35 positions with 3-7% weighting). Takes advantage of Pareto's Law: 80% of returns come from 20% of investments.
- **High-Yield returns** (7%-10%) with Investment Grade volatility (3%-6%) with the stabilization from Carry usually at [5-8%].
- Net exposures 50-100% with Gross capped at 150%. Up to 40% non-EUR FX exposures.
- Attractive Sharpe Ratio Target (1.5+) in line with what has been historically accomplished outside major crises. Aim to minimize drawdowns at 5%. Volatility should be limited in most market environments except in deep financial crisis.

Opportunity Set:

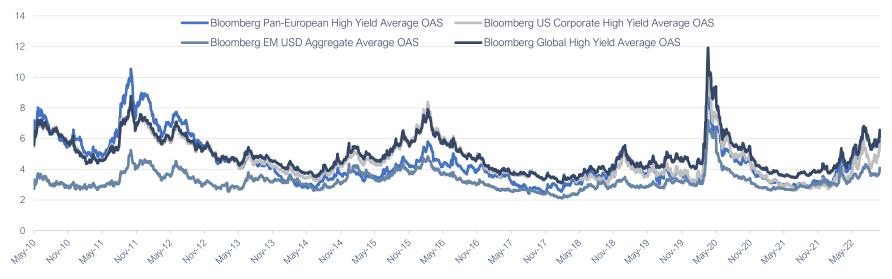

Market Update and Current Portfolio

Where are we now? Putting it in a Long-Term Perspective

Credit Markets offer significant value with historically High Total Returns

- As we have decidedly moved away from low or zero global rates, credit spreads have widened and settled at historically wide levels, in line with the wides of late 2018 and early 2016.
- Spread levels are very wide and continue to benefit from large equity cushions especially after the recent bounce back. Given the upcoming recession, managements are likely to be less equity friendly and more conscious of creditors
- Rates have reset higher, at levels not seen since 2010-11 and are currently close to those highs (possibly cycle peaks?). They face headwinds and uncertainty as a massive Central Bank support is progressively withdrawn
 - > The magnitude and impact of the monetary tightening is still unknown (especially on highly leveraged Real Estate)
 - > Large EUR Sovereign supply (€550bn), especially in Germany, as the APP is wound down (€150bn)
 - > Inflation prospects remain murky: recession impacts, labor shortages, continued supply chain disruptions
- · High Yield bonds offer attractive Total Returns
- Fully taking advantage of these opportunities requires a trading mentality, realizing profits and waiting for the next opportunity
- Markets anticipate economic realities: Bear markets typically end when the economy enters a recession so we are probably not far.

H1 2023 Convictions & Positions

	Convictions	Positions
1	Communications: Add exposure to this recession-proof sector which has massively re-rated (-20pts in many cases) with the rate and spread sell-off. Cash generation and ability to cut costs ensure strong ability to service debt.	Use issues trading at discounts such as Adria, SFR and Altice International Subs. Use Subordinated debt from IG credits such as Telefonica.
2	Retail: Certain retailers with an attractive strategic position have disappointed the market and are very attractively valued with self-help turnaround stories. A higher rate and more inflationary environment is supportive of sector's business models.	Casino Perpetual Bonds and longer-dated unsecured bonds are incredibly cheap versus almost any comparable issuer. They are true "orphans" Perps from a CCC issuer with the controlling holding company in administration. Despite being current on all coupons, unsecured bonds trade close to recovery. Cosmetics specialist Douglas offers defensive exposure. A number of Convertible bonds could become attractive targets.
3	Premium compensation in Energy: Use recent underperformance to re-weight in this defensive sector. Recent Oil price weakness combined with higher volatility have allowed us to increase back-up our holdings in low leverage credits we have been following since the 2015 crisis.	Pemex long-dated USD – 11.5%+ yield, North Sea E&P Enquest (13%) or Tullow Oil (18%) Senior Secured. All are non-US USD-denominated issues and therefore less covered and understood.
4	Fallen Angels & Perps: A historically fertile hunting ground. Leverages cross-asset approach using signals in equities and derivatives. Covid crisis accelerated cycle and BBBs migrated to HY w/ additional benefit of strong liquidity and CB support. Although the deep value from the Covid crisis has faded, trading opportunities abound, especially in the volatile times of withdrawn CB support into a recession.	At this point of the cycle, Corporate Hybrids (Subordinated Perpetual bonds from IG issuers) are particularly attractive in the recent sell-off: EDF , the Fund's largest exposure yields 8%+ in EUR. Total's A-rated bond yields 6%. These bonds stand to benefit from a topping out of rates and inflows into Investment Grade with superior carry and convexity due to their low cash prices.
5	Shareholder support among Consumer Cyclicals: Governments or private backers have shown a willingness to commit equity to certain strategically valuable assets such as airlines or luxury car brands	French government in Air France (CB yields 6.5%) and German one in TUI (CB yields 14%). Mercedes and Stroll in Aston Martin (Senior Bonds yield 12.7%) or Bahrain/Mansour Ojeh in McLaren (Senior Bonds yield 17%).
6	Leading European Banks USD-AT1s: Leading European banks benefit from record equity cushions but also offer near record yields in USD	BNP 9.75% yields 8.3%, Soc Gen 9.375%, 14% and Credit Suisse 15-20%! In EUR, La Banque Postale 3% (9.2% at 72) and BCP 9.25% (14%) are also attractive.

Credit market:

High Yield Credit spreads are back above 500bps, including in Europe. The additional yield support provided by the record pull-back in the risk free rate provides additional margin of safety. Meanwhile, the default environment remains low. After the general re-rating, the portfolio holds primarily mainstream credits with great convexity and moderate duration.

A more volatile market will favour flexible mandates and a trading style.

Long selected B/CCC's with credible self-help turnaround

Overweight recession proof sectors such as Communications, Staples that have suffered from outflows due to high index weightings, Energy, structurally Underweight.

Focus on Subordinated Corporate hybrid debt as IG-senior rating is key to them.

Investment Process Driven by Fundamentals

Investment Process

- LEVERAGE CREDIT ECOSYSTEM
- Analyst meetings with management teams
- Analyst & PM meetings with sell-side and buy-side
- Maintaining RV tables, models and core positions one-pagers
- · New issues due diligence and selective participation
- Focus on HY & Crossover names, with specific focus on sizeable positions
- Relationship with banks' syndicate and trading teams. Emphasis on quality not quantity of relationships

Portfolio Construction Approach

LARGE ISSUERS

- Focus on large issues with notional outstanding of \$250M or more
- Mainly corporates with an equity listing ample public disclosures and multiple market-based risk-pricing tools
- Bias towards "Fallen Angels" which historically tend to exhibit lower defaults
- Favor relatively transparent situations

FOCUS ON HIGHER YIELD

- Take advantage of mean-reverting characteristics of Credit
- Focus on situations with higher levels of yield pricing in some amount of risk
- · Contrarian Investment Philosophy: fully invested when risk aversion is high and under-invested when risk aversion is low
- Average Portfolio target yield of around 8%
- Few distressed positions defined as trading < 50%

CONCENTRATED PORTFOLIO

- Best ideas approach
- Bias towards equally-weighted portfolio very different from traditional indices
- · Diversification across sectors, industry and regions
- Initial sizing between 3% to 5% of Funds Assets / 25-35 single positions

MACRO OVERLAYS

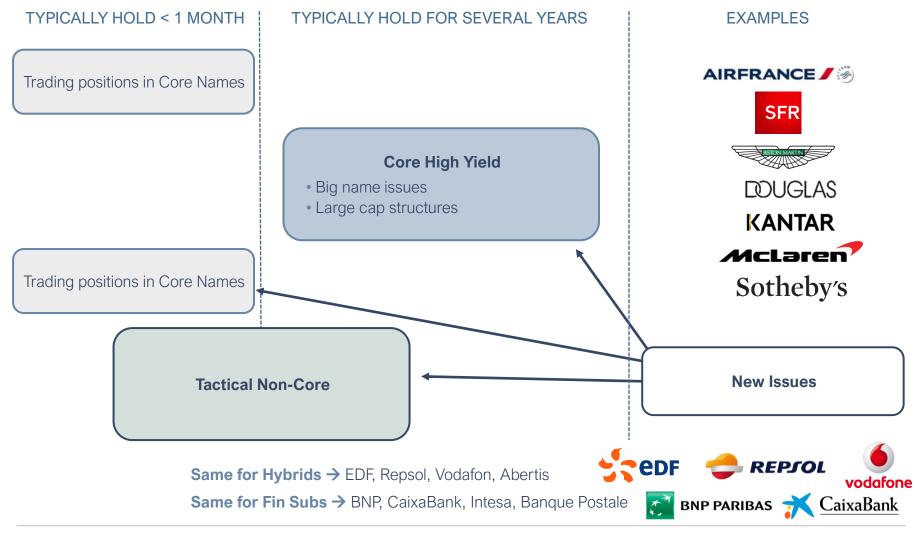

- Favored protection via diversification: allocation to Cash, Gold and Treasury Strips, long-dated Investment Grade
- · Possibility of Vanilla Credit Derivatives on Indices, Currency hedges, Equity derivatives when attractive

Fallen angel bonds have boasted higher "rising star" success than original-issue high yield bonds—meaning more fallen angels have risen back up to investment grade status (5.3% versus 2.6% averaged annually).[3.Since inception of BofA Merrill Lynch US Fallen Angel High Yield Index on 12/31/2003.] Finally, fallen angel bonds have experienced lower average default rates versus original-issue high yield bonds (3.5% versus 4.5%),

Portfolio Construction

Portfolio anchored on long term core holdings in high quality businesses with a leveraged balance sheet complemented by opportunistic trading positions.

Portfolio Limits

Global Unconstrained Portfolio with a European-Focus

Broad range of High Yield Assets predominantly Europe-related

Geography

Opportunistic and unconstrained asset allocation to navigate the entire credit cycle

Issuer	Weight	Coupon, Maturity, Ranking	
Net Exposure	100% Target	Goal is to invest in best value available	
Minimum Net Exposure	50%	Rest can be in OECD Money market Products, G10 Treasuries, Gold, ETFs	
Maximum Net Exposure	100%	The Fund does not aim to use financial leverage to be long-only	
Maximum Gross Exposure	150%	Gross exposure > 100% only possible by using hedges via CDS	
Minimum Issue size	\$250M equivalent	Focus on instrument liquidity	

Risk & Liquidity Management

Rules based on lessons learned over last 25 years

Risk Management

- Stop-loss policy: 1.5% of NAV stop-loss at individual name level
- · Independent Risk Manager:

Credit Portfolio Liquidity management is derived from strict rules and 25 years of capital markets experience

SIZEABLE SINGLE ISSUES

- Fund will only invest in issues of \$250M or more
- For AT1, that threshold is raised to \$400M

MULTIPLE MARKET MARKERS

- Each issue will have at least 3 market makers
- The fund faces leading investment banks as counterpart

DIVERSIFIED PORTFOLIO

- Maximum position sizing rule : the Fund will never own more than 5% of any issue
- UCITS diversification rule +
 - ➤ Single Name risk < 8% of NAV
 - > Typically 3-5%

FUND CAPACITY

- · To deliver liquidity and
- Implement the current strategy
- > Fund capped at EUR 500M

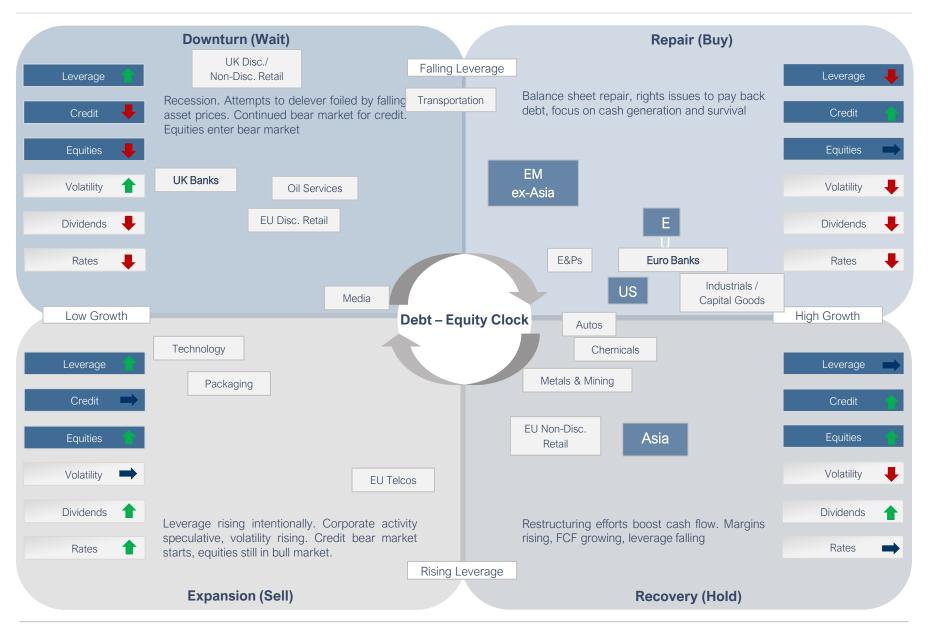

Update on the Asset Class

Majority of Sectors and Regions in a Recession

Relevant timing for Unconstrained Credit strategy vs. traditional approach

Attractive Risk-Adjusted Returns from the Asset-Class

In last 10 years, High Yield Returns matched Equities with lower volatility and lower drawdowns

- During the last significant drawdown periods since the GFC, Global HY
 - · Experienced drawdowns approx. half the size of Equity markets
 - While delivering returns in the same ballpark (equal in Europe, better in EM but lower in the US)
 - With volatility 3-5x lower

Drawdown Period	Global High Yield	Global Equities
Q3 2011	-10.78%	-20.74%
H2 2015	-11.1%	-17.75%
2018	-5.6%	-18.36%
Q1 2020	-20.87%	-31.5%
H1 2022	-22.82%	-16.87%

	Global	US	Europe	EM
Equities Total Return	2.58x	3.63x	2.08x	1.16x
Equities Price Performance	1.96x	2.93x	1.44x	0.86x
Equities Average 260-Day Volatility	19.570	23.41	18.77	18.65
High Yield Total Return	1.40x	1.38x	1.31x	1.24x
High yield Average 260-Day Volatility	7.12	11.29	8.78	13.02

Source: Bloomberg Barclays Indices, MSCI Indices, Bloomberg

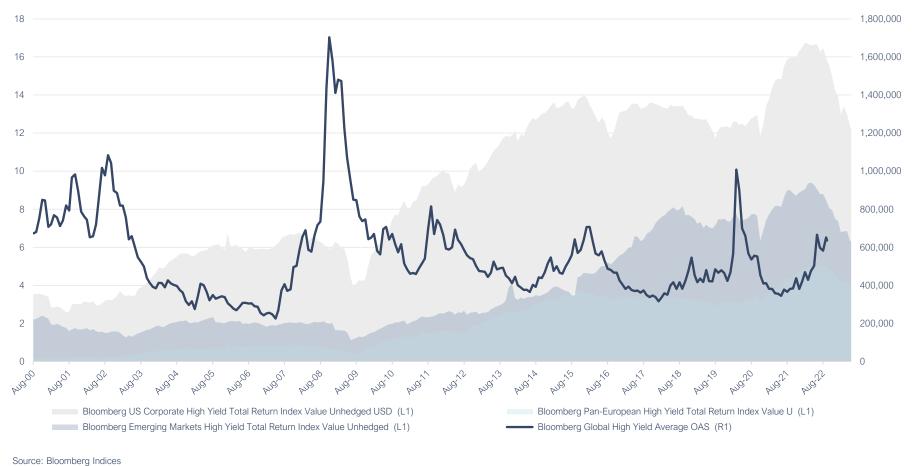

Global High Yield Debt has resumed its growth, and spreads have normalized

Selection to Drive Performance

- Leveraged Loans have competed against High Yield Bonds
- A significant proportion of the debt build-up since 2009 has been in Emerging Markets. Will the current growth slowdown create an investment opportunity, or can we get lulled into the pocket of excess from this credit cycle?

Longchamp AM - Key Professionals

Jean Fau, Credit Fund Manager

Jean has 25 years of experience in capital markets and joined Longchamp Asset Management in September 2019 to lead Credit Strategies and manage the Credit Value Fund. His career started in 1994 at Goldman Sachs, taking various responsibilities in Convertible Bonds and Equity Derivatives, gaining close exposure to relative value and credit hedge funds. In 2003, Jean joined Susquehanna International as a Portfolio Manager, responsible for European Discretionary Investments across credit, convertible and event-driven strategies. In 2009 Jean left to launch Brennus Asset Management LLP, a London-based alternative investments manager, focused on convertible bonds and other hybrid credit instruments, using a mix of directional and relative value strategies. Before joining Longchamp Jean was a Partner and Senior Portfolio Manager at Chenavari Credit Partners from December 2014 until April 2018, where he ran High Yield, Financials and Convertible Bonds strategies across all mandates.

Jean holds a master degree in Business Administration from HEC Paris, France.

David Armstrong, Chief Investment Officer

David is Chief Investment Officer at Longchamp Asset Management. Previously, he was a Managing Director at Morgan Stanley & Co. International Plc, acting as global head of the investment bank's Funds and Fund Linked business. In particular, he was in charge of the FundLogic Alternatives Plc (UCITS) Platform and served as President of the French asset management company. FundLogic SAS.

Before joining Morgan Stanley, David worked at Société Générale Corporate & Investment Banking in the Equity Derivatives division in Paris before moving to Milan to take the responsibility for the Italian Capital Markets, and then joining Société Générale's New York office to head the Structured Products division for the Americas.

David holds a master's degree in Business Administration from EDHEC, Lille, France.

Lorenc Golemi, Head of Financial Engineering - Chief Risk Officer

Lorenc is the Chief Risk Officer at Longchamp AM. Before joining Longchamp AM, Lorenc worked in consultancy and advisory in investment banking and asset management. Previously he worked as Portfolio Manager, Risk Manager and Financial Engineer at UBS AM, CommerzBank and Dresdner Kleinwort Benson. He was in charge of systematic strategies and risk management of volatility and absolute return funds.

Lorenc holds an Engineer degree in computer science and a master's degree in applied mathematics.

Isabelle Mérou, Portfolio Manager

Isabelle is Junior Portfolio Manager at Longchamp Asset Management. In particular, she is dedicated to fund structuration, multi-management funds and wealth management mandates. Previously, Isabelle worked at Société Générale Bank and Trust (SGBT) in the Cross Assets OTC Derivatives dealing desk. She worked on several projects including portfolio review, restructuration, strategy implementation and development as well as regulatory issues. Before joining SGBT, Isabelle worked at Société Générale Corporate and Investment Banking (SGCIB) as Foreign Exchange Derivatives and Structured Products Sales.

Isabelle holds an Engineering Diploma in Financial Engineering from the Léonard de Vinci Graduate School of Engineeringstrutturati.

Thibault Bourgeois, Portfolio Manager Assistant

Thibault is Portfolio Manager Assistant at Longchamp AM. Previously, he was in charge of the sales and structuration of investment solutions for institutional clients at Nexo Capital. Before that, Thibault had experiences at ERAAM in the multi-management hedge funds selection and sales teams and at Amundi in the Institutional Portfolio Management team.

Thibault holds a BSc. Actuarial Mathematics/Finance from Concordia University (CA) and a Master in Management from ESCP Business School (FR).

Disclaimer: Past performance is not an indicator of future performance. The track record is computed growth. The track record is split into three periods. Period 1 (from Jan 2010 to Aug 2014) is Audited and relates to a Fund managed by the PM. Period 2 (from Dec 2014 to Apr 2018) is unaudited as representative of PM's book within a larger multi-strategy fund. Period 3 (from July 2018 to Dec 2019) is unaudited and relates to Personal Account trading before launching the Longchamp Solferino Credit Fund, computed with the Bloomberg PORT function. Contributions from Equities have adjusted for in Period 2 and 3. IRR is computed eliminating transition periods.

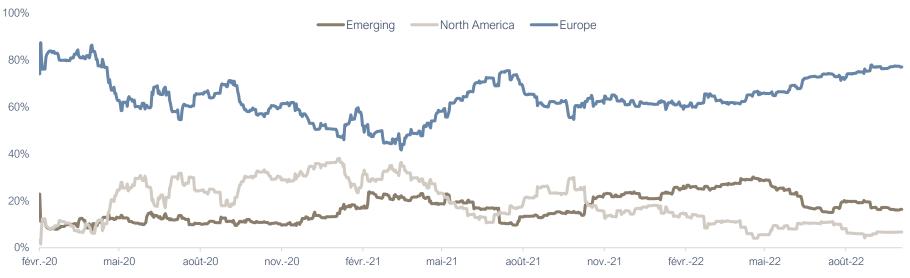

Hedge Overlay – Construction (1)

Hedging objective

The hedging strategy consists in adding to the Solferino fund an overlay, aiming to reduce the volatility and drawdowns.

- 1. Analyzing the Solferino composition, we can break down the geographic exposure in:
 - North America
 - Europe
 - Emerging Markets
- 2. We aim cover risk of the 3 markets shorting North American and European High Yield ETFs, efficiently replicating the Emerging Market Index as a combination of the previous two
- 3. We set the rebalancing bands at 10% in order to address hedging efficiency and management fees control. Under that level of exposition change in the core portfolio, the hedge overlay doesn't change

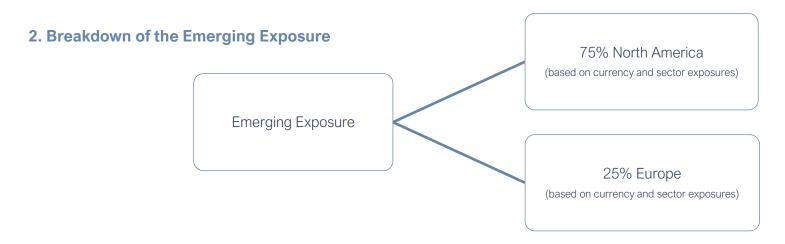

1. Historical analysis of Geo. Exposures of Solferino

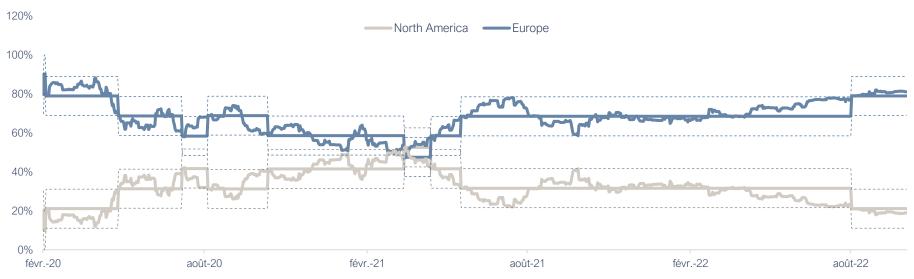

Indices used: HYG US total return in USD for the North American HY Market; IHYG LN total return in EUR for the European HY Market. Assumptions: 1% p.a. reporate, bid-ask spread of 0,5% for each rebalancing, 10% rebalancing bands

Hedge Overlay – Construction (2)

3. Implementation of the strategy with 10% rebalancing bands

Indices used: HYG US total return in USD for the North American HY Market; IHYG LN total return in EUR for the European HY Market.

 $Assumptions: 1\% \ p.a. \ repo \ rate, \ bid-ask \ spread \ of \ 0,5\% \ for \ each \ rebalancing, \ 10\% \ rebalancing \ bands$

Hedge Overlay – Results (1)

Hedging overlay construction:

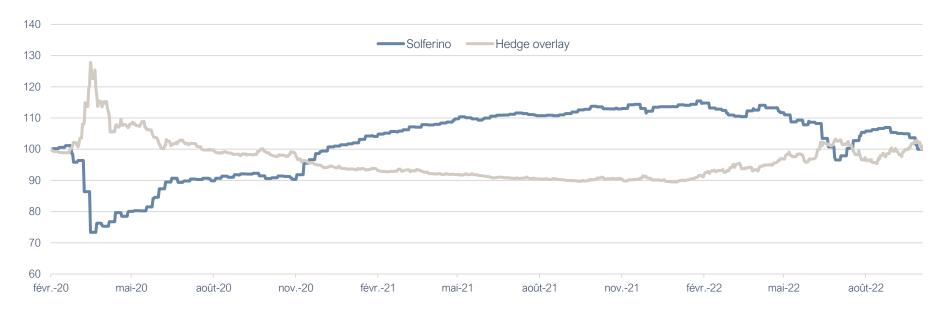

Once we have calculated the geographical exposures of the fund, we build a portfolio comprised of:

- 100% invested in Solferino
- 100% invested in the Hedge Overlay

Thus, by combining the two strategies:

- The credit exposure has been drastically reduced.
- The hedge overlay acts as a mirror of the Solferino fund and curbs the drawdowns

Comparison of the cumulative performance of the hedge overlay vs Solferino

Indices used: HYG US total return in USD for the North American HY Market; IHYG LN total return in EUR for the European HY Market. Assumptions: 1% p.a. reporate, bid-ask spread of 0,5% for each rebalancing, 10% rebalancing bands

Hedge Overlay – Results (2)

Comparison of the cumulative performance of the Hedged strategy vs Solferino

Portfolio Statistics

Metric	Solferino	Solferino + Overlay		
LTD perf	0,30%	2.13%		
Volatility (ann.)	13,17%	6,86%		
Drawdown	-26,66%	-13,34%		
Beta with Global High Yield Hdg. EUR	1.09	0.03		
Correlation	33.96%			

Indices used: HYG US total return in USD for the North American HY Market; IHYG LN total return in EUR for the European HY Market. Assumptions: 1% p.a. repo rate, bid-ask spread of 0,5% for each rebalancing, 10% rebalancing bands

Solferino in 2020? An eventful year

How do we explain market and Fund behavior in the March-April period

Development

- Virus spreads
- Participants realize magnitude of impact. OPEC+ disagreement
- Central Banks and Governments React
- Optimism over end of lockdown and impact of government measures on real economy

Market Reaction

- Indices Sell-Off
- Fund Outflows. Energy and Banks in the Eye of the storm: OPEC+ fight + prospect of more NPLs
- Bottom is found and IG issuance Resumes
- Broad rally, led by Equities (esp. leaders), then IG, then HY, then EM

Solferino Portfolio Impact

- Sharp sell-off led by Energy holdings
- Broad pullback with especially sharp moves in Energy and Financials, even impacting short/term senior bank bonds
- Rotation into defensive names with prices impacted by broad sell-off, including national champion's AT1s
- 35% Rebound with relative performance impacted by a handful of core holdings and enhanced by trading names and overall fund exposure

Lessons Learned: What did we do (wrong) in Q1 2020

Convictions	Positions	Contribution Q1/Q2	Comments
Energy & Natural Resources: Take advantage of sector underperformance, one of the few pricing in a slowdown	Use Offshore Services as an unloved and more leveraged play Keep a core of FCF generating E&P at attractive spread per lvg.	Q1 -9.1% Q2 +6%	Although sector had already priced in Asia, it had not priced in its spreading to Europe and the Saudi/Russia oil price war. Drillers were a particularly poor choice
Retail: Certain retailers with an attractive strategic position have disappointed the market and are very attractively valued with self-help turnaround stories	Casino Perpetual Bonds Hema Senior Bonds	Q1 +0.6% Casino	Casino ended up being a winner from the situation but the name remains tainted and lags Hema's business model was put into question but we traded around in the name
	Stay focused on national champions , Global businesses with the ability to earn foreign currency and service debt and government support		As in most periods of stress, Latam countries suffered as export/driven economies. Pemex remains a core holding.
Fallen Angels: A historically fertile hunting ground. Leverages cross-asset approach using signals in equities and derivatives. More to come: as the cycle matures, BBBs will migrate to HY.	Vallourec, TransOcean, Adient (Johnson Controls spin-off), Pemex, Petrobras, Casino all formerly IG rated names Chemours (spin-off from DuPont) and US Steel among Industrials		This developed into a key theme that was central to the Fed intervention and helped us play the recovery. We successfully traded Vallourec multiple times
End of Cycle Trades: Short tight Cyclicals funded through selected higher carry securities in the same industry	Hess, Anadarko, ThyssenKrup, CNH offer cheap hedges with operational leverage Autos (Fiat, GM, Volvo CDS v. VW Hybrids), Retail (M&S)		Unfortunately the Fund was not in a position to invest in those trades
Telcos: A historically defensive and recession-proof sector. Offers duration products and plentiful supply means.	Niche players offer significant pick-up to peers: IG-rated SES (Baa2/BBB-) satellite services provider, EM plays such as Oi Brazil (formerly merged with Portugal Telecom)	Q1 -2.3% Q2 +2.3%	Telcos did not provide the expected resilience as beyond a bear market, we were in an environment of hunt for liquidity
Credit market: Credit spreads likely to reprice wider as cycle matures. BB to underperform, especially when/if large BBB cap structures migrate to BB.	Overweight recent underperforming sectors such as HV &	Fins Q1 -7.8% Q2 +7%	Although we correctly identified unattractive valuations and avoided the AT1 segment, the portfolio was not positioned for such a violent stop to economic activity and search for liquidity. Event-driven holdings got clobbered.

RISK WARNING

PAST PERFORMANCE IS NOT A GUARANTEE OF FUTURE PERFORMANCE. HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS, SOME OF WHICH ARE DESCRIBED BELOW. THE VALUE OF THE INVESTMENTS AND THE INCOME FROM THEM CAN GO DOWN AS WELL AS UP AND AN INVESTOR MAY NOT GET BACK THE AMOUNT INVESTED. THERE CAN BE NO ASSURANCE THAT THE FUND WILL ACHIEVE ITS INVESTMENT OBJECTIVES. AS SUCH, NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFITS OR LOSSES SIMILAR TO THOSE SHOWN. IN FACT, THERE ARE FREQUENTLY SHARP DIFFERENCES BETWEEN HYPOTHETICAL PERFORMANCE RESULTS AND THE ACTUAL RESULTS SUBSEQUENTLY ACHIEVED BY ANY PARTICULAR TRADING PROGRAM. ONE OF THE LIMITATIONS OF HYPOTHETICAL PERFORMANCE RESULTS IS THAT THEY ARE GENERALLY PREPARED WITH THE BENEFIT OF HINDSIGHT.
